                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigionic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present
The present invention describes a number of peptides which are able to bind to HIV glycoprotein 120 (gp120). These are similar to the human chemoxine receptors CRS. CXCR4 and STR133, as well as CD4. These are useful in the treatment of HIV, as they prevent replication of the virus. The present sequence is an example of a peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                    reading frame of a parhogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present

The invention relates to a novel stable pharmaceutical composition comprising one or more interferon (IFN)-beta compound(s) formulated for mucosal delivery to a mammalian subject in combination with one or more mucosal delivery to a mammalian subject to the composition following mucosal administration to the subject yields enhanced mucosal delivery of the one or more IFN-beta compound(s). A composition following immunosuppressive and virucide activity. The composition is useful for treating autoimmune diseases, viral disease, for alteviating one or more symptom(s) of multiple sclerosis (MS), chronic hepatitis B, condyloma acuminata, papilloma virus warts of the larynx or skin or childhood viral encephalitis in the subject without unacceptable adverse side effects. The composition can be delivered intranasally which reduces or eliminates compliance problems and side effects that attend delivery by injection. The sequences shown in AbG94022-Ap04810 represent permeabilising
                                                                                                                                                                                                                                                                                                                                                                                                               Stable pharmaceutical composition comprising interferon compound(s) formulated for mucosal delivery to mammalian subjects in combination with mucosal delivery-enhancing agent(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mucosal delivery; permeabilising peptide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                         Composition comprising biologically active agent and permeabilizing peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology in mammal.
                                                                                                                                                                                                                                      This invention relates to a novel composition comprising a biologically active agent and mucosal delivery-enhancing effective amount of permeabilising peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology in a mammal. The agent of the invention inhibits homotypic binding of epithelial membrane adhesive protein chosen junctional adhesion molecule (JAM), occludin and claudin. The biologically active agent is effective for treatment of sexual dysfunction, for example male erectile sexual dysfunction or female sexual dysfunction. The present sequence is that of a permeabilising peptide of human JAM-2 which may be used during the production of the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  anorectic; cytostatic; eating disorder; neuroprotective; nootropic; cachexia; intranasal composition; peptide YY; obesity; cancer; malnutrition; wasting, Alzheimer; disease; colon adenocarcinoma; panoreatic adenocarcinoma; breast carcinoma; cachexia; cancer cachexia; junctional adhesion molecule 2; JAM-2; epithelial junction; human.

The invention describes an intranasal composition comprising peptide YY compound(s) formulated for mucosal delivery to a mammalian subject. Also described is a kit for treatment of a mammalian subject comprising the intranasal composition of peptide compond(s). The composition is used for treating obseity, cancer, or malnutrition or wasting related to cancer in the subject. It is used to alleviate Alzheimer's disease, colon adenocarcinoma, pencreatic adenocarcinoma, breast carcinoma, treatment and prevention of malnutrition resulting from iatrogenic causes or cachexia associated with advanced disease, or cancer cachexia in the subject. The composition alleviates the symptoms without unacceptable adverse side effects. This is the amino acid sequence of a human junctional adhlesion molecule 2 (JAM-2) that may be used in a composition of the invention to modulate epithelial junction structure and/or
Intranasal compositions for treating obesity, cancer, or malnutrition or wasting related to cancer, comprises peptide compound(s) formulated for mucosal delivery to mammalian subject.
                                                                                                                                                                                                                                                                      Disclosure; SEQ ID NO 426; 86pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC -1- CATALTIC ACTIVITY: Sadenosyl-1-methionine = (5-deoxy-5-deoxy-5-denosyl)(3-minopropyl) methylsulfonium salt + CO(2).

CC -1- COFACTOR: Pyruvoyl group.

CC -1- PATHWAY: Decarboxylation of S-adenosylmethionine provides the anthopropyl moiety required for spermidine and spermine biosynthesis from putrescine.

C -1- SUBNITH: Heteroterramer of two alpha and two beta chains.

C -1- SUBNITH: Heteroterramer of two alpha and two beta chains.

C -1- SUBLOPMENTAL STAGE: Expressed only during exponential growth.

C -1- INDUCTION: Stimulated by putrescine. Inhibited by aromatic diamidines berenil, pentamidine, propamidine, hydroxystilbamidine, by ethidium bromide and methylglyoxal.

C -1- SIMILARITY: Belongs to the eukaryotic AdoMetDC family.

PER: S18763; S18763.
-i- FUNCTION: S-adenosylmethionine decarboxylase is essential for the biosynthesis of spermine and spermidine. The alpha subunit contains the active site.
                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Nishimura M., Matsuo H., Sugiyama M.;
"Blasticidin S-producing Streptomyces morookaensis possesses an enzyme activity with hydrolyzes puromycin.";
PEMS Microbiol. Lett. 132:95-100(1995).
-!- FUNCTION: INACTIVATES PUROMYCIN BY CATALYZING THE HYDROLYSIS OF THE AMIDE LINKAGE BETWEEN ITS AMINONUCLEOSIDE AND O-METHYL-L-TYROSINE MOIETIES. THE OPTIMUM PH IS 8.0 AND THE OPTIMAL TEMPERATURE IS 45 DEGREES CELSIUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: MAY HAVE AMINOPEPTIDASE ACTIVITY.
BY REGULATION: STIMULATED BY DIT. STRONGLY INHIBITED BY ZINC
ION, FERROUS ION, CUBRIC ION, WERCURY ION, N-BROWOSUCCINIMIDE AND
N-ETHYLMALEIMIDE. PARTIALLY INHIBITED BY COBALT ION.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

paragoral crystal protein, wax moth-specific - Bacillus thuringiensis (strain galleria paragoral crystal protein, wax moth-specific - Bacillus thuringiensis
NyAlternate names: delta-endotoxin; parasporal crystal protein positive chain
Sybcies: Bacillus thuringiensis
C; bate: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 09-Jul-2004
C; Accession: 500616
R; Chestuchina, G.G.; Kostina, L.I.; Zalunin, I.A.; Khodova, O.M.; Stepanov, V.M.
FEBS Lett. 232, 249-251, 1988
A; Pitle: Bacillus thuringiensis ssp. galleriae simultaneously produces two delta-endoto:

Deglactose-binding lectin III - Axinella polypoides (fragment)
Cispecies: Axinella polypoides
Cipate: 19-Mar-1997 #sequence_revision 14-Nov-1997 #text_change 09-Jul-2004
CiAccession: 829174

## ALIGNMENTS

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92245-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis Hepatotropic; antagonist; transforming growth factor betal; TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis. Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-b) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-b1 and/or its receptors. Peptides AAY92945-Y91313 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hepatotropic; antagonist; transforming growth factor betal; TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-bl and/or its receptors. Peptides AAY92945-Y93131 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-bl to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver disease, specifically cirrhosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatotropic, antagonist, transforming growth factor betal, TGF-bl; competitive inhibition; collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-bl) to its receptor in vivo which have partial amino acid sequences identical, or similar, with
                                                                               Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ۵.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to synthetic peptides that antagonise the binding of transforming growth (TGF) factor betal (TGF-b1) to its receptor in vivo which have partial amino acid sequences identical, or similar, with those of TGF-b1 and/or its receptors. Peptides AAY92945-Y9313 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver
                                                                                                                                                                                                                                                                                                                                                         Peptides that antagonize binding of transforming growth factor betal, useful for treatment of liver disease, especially cirrhosis, are partial sequences of the factor or its receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hepatotropic, antagonist, transforming growth factor betal; TGF-b1, competitive inhibition, collagen synthesis stimulation inhibitor; liver; extracellular matrix degradation inhibitor; mimetope; cirrhosis.

those of TGF-b1 and/or its receptors. Peptides ANY92945-Y93133 represent examples of the peptides of the invention. The peptides act by competitive inhibition of the binding of TGF-b1 to its receptors, e.g. they are inhibitors of stimulation of collagen synthesis in liver cells and inhibitors of synthesis of proteolytic enzymes able to degrade the extracellular matrix. The peptides, their mimetopes and/or DNA (or expression systems) encoding the peptides are used for treatment of liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A novel human breast susceptible gene coded protein 10.45 polypeptide, and the polynucleotide encoding it, useful for treating several diseases e.g. embryotic development deformity and tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes human breast susceptible gene coded protein 10.45 (I). Also described is a process for preparing (I) using DNA recombination techniques. (I) can be used for treating several diseases e.g. embryotic development deformity and tumours. The present sequence represents the N-terminal peptide of (I), which is used in an example from the present invention

The present invention describes a method (MI) for screening or diagnosing a liver response in a subject, determining the stage or severity of a liver response in a subject, identifying a subject at risk of developing liver response, or monitoring the effect of therapy administered to a subject having liver response, involving detecting liver response.

Could be associated protein isoforms (LMRIS) (see the peptides given in ABR75395 to ABR75806) in a test biological sample from the subject, or monitoring the screening or diagnosing a liver response in a subject, or monitoring the screening or diagnosing a liver response in a subject, or monitoring the consecutive nucleotides complementary to a nucleotide sequence encoding consecutive nucleotides complementary to a nucleotide sequence encoding with cDNA copied from the RNA, where the contacting occurs under conditions that permit hybridisation of the probe to the nucleotide sequence, and comparing the hybridisation, if any, detected in the above steep, with the hybridisation detected in a control and ample or with a previously determined reference range. Mi su seeful for ample or with a previously determined reference range. Mi su useful for ample or with a previously determined reference range. Mi su useful for ample or with a previously determined reference range. Mi su useful for ample or with a previously determined reference range. Mi su useful for any and comparing the subject or with a previously determined reference range.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               screening or diagnosing a liver response in a subject, determining the stage or severity of a liver response in a subject, identifying a subject at risk of developing liver response, and monitoring the effect of
                                                                                        Liver response-associated protein isoform (LRPI) peptide SEQ ID NO:332.
                                                                                                                                                                             Biomarker; liver response; liver response-associated protein isoform;

```
response in a subject, determining the stage or severity of a liver response in a subject, dentifying a subject at risk of developing liver response, or monitoring the effect of therapy administered to a subject having liver response. The method involves detecting liver Response. Associated protein Isoforms (LRPIS) in a test biological sample from the subject, which has an activity or level indicative of a liver response. LRPIS are selected from any one of the compounds given in the specification e.g. LRPI-1.1, LRPI-2.1, LRPI-3.1 and LRPI-4.1 a subject, or monitoring the effect of a drug or therapy administered to a subject, or monitoring the effect of a drug or therapy administered to a subject, or more consecutive nucleotides complementary to a nucleotide sequence encoding an LRPI with RNA obtained from a biological sample from the nucleotides complementary to a nucleotide sequence conditions that permit hybridisation of the probe to the nucleotide sequence, and comparing the hybridisation detected in a control sample, or with a previously determined reference range. The method is cueful for screening or diagnosing a liver response in a subject, determining the stage or severity of a liver response, and subject at risk of developing liver response, and control sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a method of screening (M1) or diagnosing a liver

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to phosphopeptides that inhibit protein tyrosine phosphatase. The phosphopeptides are useful as a medicament of for manufacturing a medicament for the treatment and/or prevention of cancer (i.e. stomach or intestinal cancer), diabetes and/or obesity, inflammation, multiple sclerosis, angiogenesis-dependent disease (e.g. solid cancer or metastatic cancer) or infectious disease (i.e. leishmaniasis), or as a suppressor of appetite. These may also be used for preventing or treating congestive heart failure, neurodegenerative diseases, ischaemic events of the brain or demyalinating diseases. The present sequence is one such phosphopeptide from protein tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New phosphopeptides that inhibit protein tyrosine phosphatases, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to phosphopeptides that inhibit protein tyrosine phosphatese. The phosphopeptides are useful as a medicament or for manufacturing a medicament for the treatment and/or prevention of cancer (i.e. stomach or intestinal cancer), diabetes and/or obesity, inflammation, multiple sclerosis, angiogenesis-dependent disease (e.g. solid cancer or metastatic cancer) or infectious disease (i.e. leishmaniasis), or as a suppressor of appetite. These may also be used for preventing or treating congestive heart failure, neurodegenerative diseases, ischaemic events of the brain or demyelinating diseases. The phosphatase 18 (PTP1B).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New phosphopeptides that inhibit protein tyrosine phosphatases, useful for manufacturing a medicament for preventing or treating e.g. cancer, diabetes, obesity, inflammation, multiple sclerosis or infectious

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cardiant; Neuroprotective; Protein tyrosine phosphatase inhibitor; phosphopeptide; protein tyrosine phosphatase; cancer; diabetes; obesity; inflammation; multiple sclerosis; angiogenesis-dependent disease; infectious disease; appetite suppressor; congestive heart failure; neurodegenerative disease; ischaemia; demyelinating disease; PTP1B;
                                                                                                                                                                                                                                                                                                                                                The present invention relates to phosphopeptides that inhibit protein tyrosine phosphatase. The phosphopeptides are useful as a medicament or for manufacturing a medicament for the treatment and/or prevention of cancer (i.e. stomach or intestinal cancer), diabetes and/or obesity, inflammation, multiple sclerosis, angiogenesis-dependent disease (e.g. solid cancer or metastatic cancer) or infectious disease (i.e. leishmaniasis), or as a suppressor of appetite. These may also be used for preventing or treating congestive heart failure, neurodegenerative diseases, ischaemic events of the brain or demyelinating diseases. The present sequence is one such phosphopeptide from protein tyrosine
                                                                                                                                                                                                                                                                  New phosphopeptides that inhibit protein tyrosine phosphatases, useful for manufacturing a medicament for preventing or treating e.g. cancer, diabetes, obesity, inflammation, multiple sclerosis or infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytostatic, Antidiabetic; Anorectic; Antiinflammatory; Antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to phosphopeptides that inhibit protein tyrosine phosphatase. The phosphopeptides are useful as a medicament or for manufacturing a medicament for the treatment and/or prevention of cancer (i.e. stomach or intestinal cancer), diabetes and/or obesity, inflammation, multiple sclerosis, angiogenesis-dependent disease (e.g. solid cancer or metastatic cancer) or infectious disease (i.e. leishmaniasis), or as a suppressor of appetite. These may also be used for preventing or treating congestive heart failure, neurodegenerative diseases, ischaemic events of the brain or demyelinating diseases. The present sequence is one such phosphopeptide from protein tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New phosphopeptides that inhibit protein tyrosine phosphatases, useful for manufacturing a medicament for preventing or treating e.g. cancer, diabetes, obesity, inflammation, multiple sclerosis or infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               дарв .

Publication No. US20030066615A1

GENERAL INFORMATION:

TITLE OF INVENTION: POLYBEPTIDES THAT BIND HIV GP120 AND RELATED NUCLEIC

TITLE OF INVENTION: ACIDS, ANTIBODIES, COMPOSITIONS, AND METHODS OF USE

FILE REPERENCE: 215875

CURRENT APPLICATION NUMBER: US/10/084,813

CURRENT APPLICATION NUMBER: PC7/US00/23505

PRIOR FILING DATE: 2000-08-25

PRIOR FILING DATE: 1999-08-27

NUMBER OF SEQ ID NOS: 1242

SEQ ID NO 1220

LENGTH: 12
